Ringkasan Progres

Web Management

14
Web Page berhasil dibuat

33/33
Endpoint API sesuai kontrak OpenAPI

3/3
Peran aktif: admin, marketing, konsumen

Modul Web Fungsional (test case lulus)

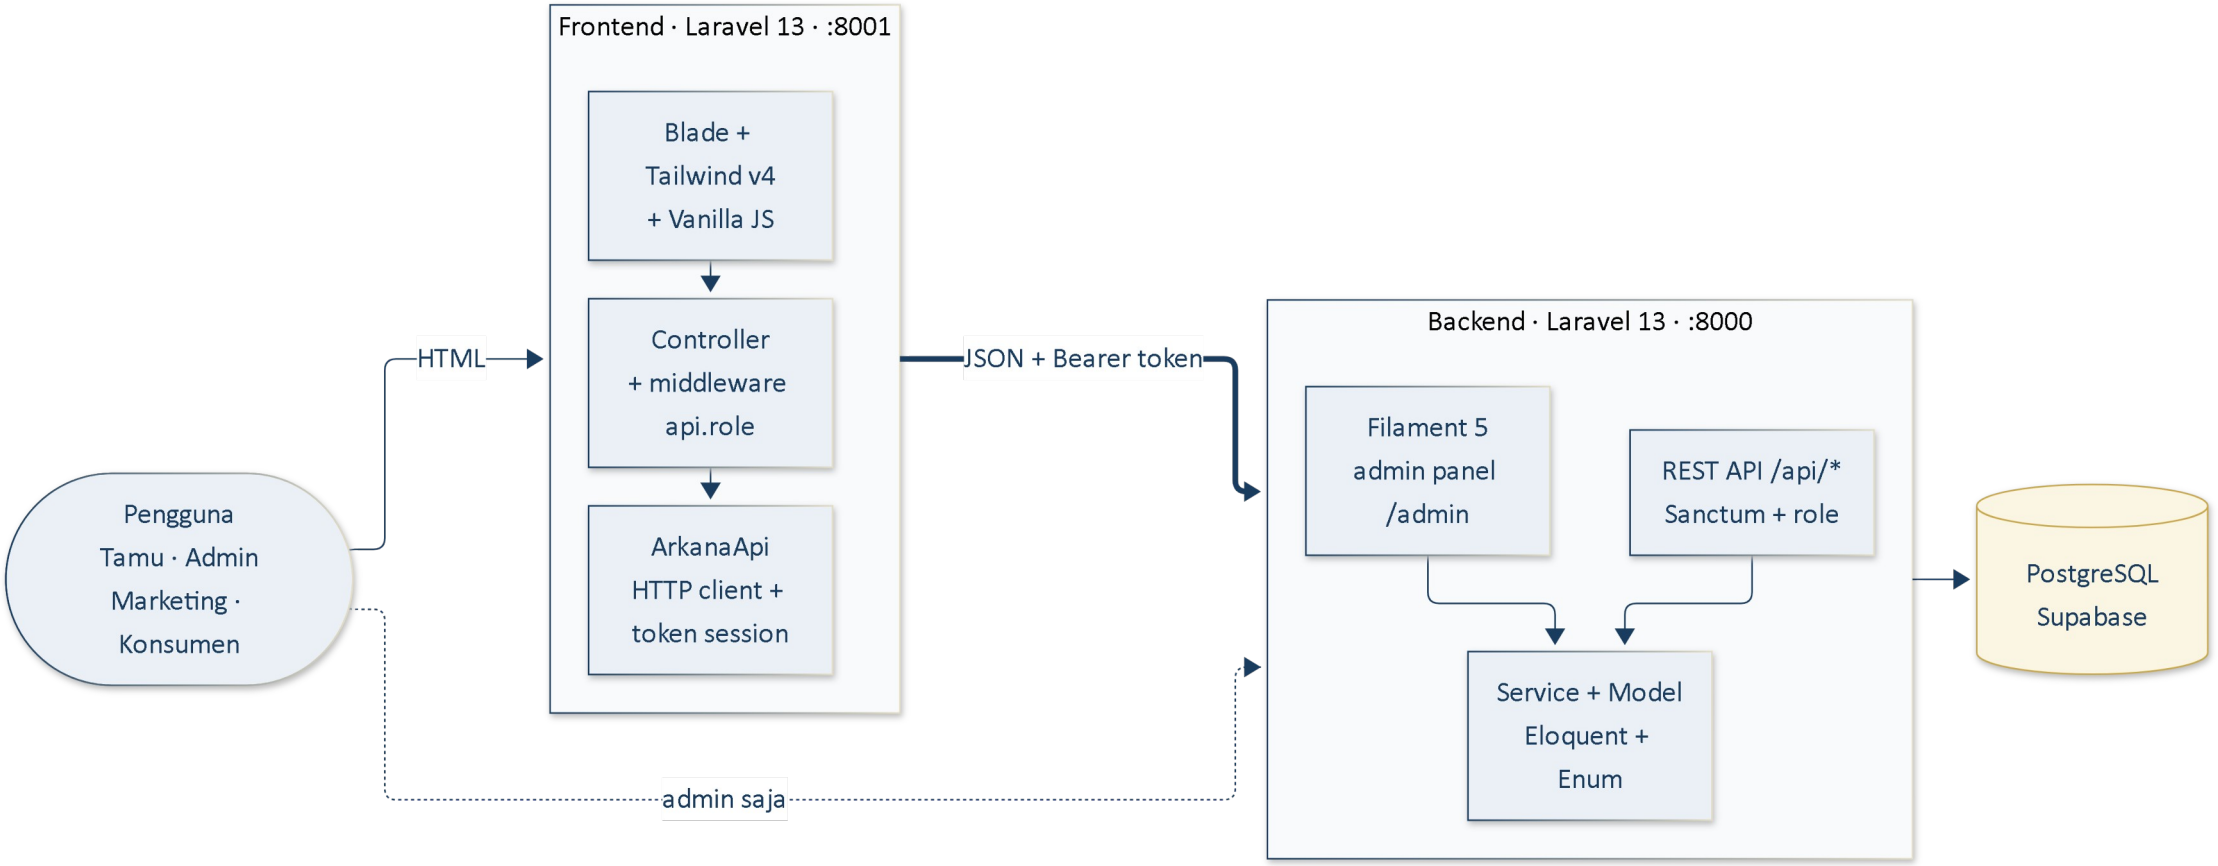

7/7
Katalog dan Form Minat

31/31
Manajemen Admin

5/5
Marketing

2/2
Portal Konsumen

Gambaran Sistem dan Arsitektur

Frontend memanggil REST API dari sisi server (token Sanctum di session). Admin juga dapat memakai Filament langsung di backend.

Hasil Pengujian Sementara

Menggunakan Feature Test (PHPUnit), database sqlite in-memory

Skenario Pengujian	Jumlah Test Case	Tingkat Keberhasilan
Autentikasi dan Sesi Login	5	100%
Katalog Publik dan Form Minat	7	100%
Modul Admin (API)	11	100%
Modul Admin Panel (Filament)	20	100%
Modul Marketing	5	100%
Portal Konsumen	2	100%
Total	**50**	**100%**

Sumber: php vendor/bin/phpunit, 52 test dijalankan (2 ExampleTest bawaan Laravel tidak dihitung), 207 assertion, 0 gagal.

Evaluasi Progres dan Pekerjaan Selanjutnya

Capaian

- 14 halaman web selesai: landing, detail properti, login, 5 admin, 3 marketing, 3 portal
- 33 endpoint REST API dan admin panel Filament
- Alur lead tersambung: form minat, validasi KTP, akun portal, booking kavling
- 50 test case lulus 100%

Kendala Pengembangan

- Transisi status kavling belum dikunci; alur bergantung pada admin
- Kredensial portal konsumen dikirim manual oleh admin (password tampil sekali)
- Frontend bergantung penuh pada API; halaman panel gagal dimuat jika API mati
- tb_kalender.id_leads merujuk ke tb_akun, rawan membingungkan

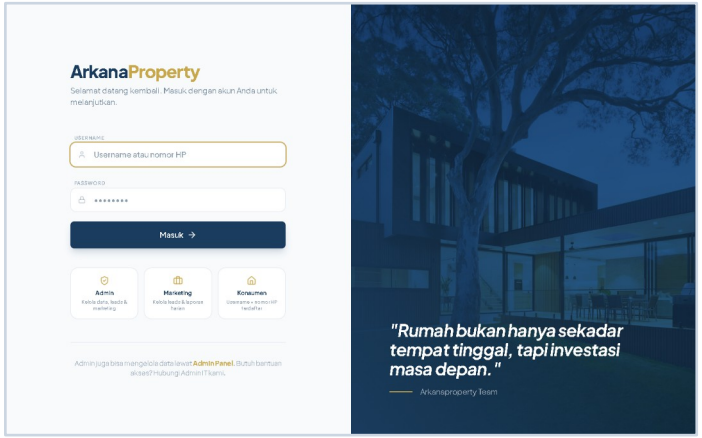

Pekerjaan Selanjutnya

Deployment Produksi

Notifikasi Kredensial Otomatis

Validasi Transisi Status Kavling
